

JG Aura Probe

External temperature probe for UFH applications

Overview

JG Aura Probe is used to control underfloor heating (UFH) temperature in rooms where moisture could cause an issue e.g. wet rooms or bathrooms. The sensor is ideal for areas where thermostats cannot be directly installed. It can also control floor temperature where overheating would cause damage. A JG Aura Probe box is required and sold separately.

Features & benefits

- Monitors and controls temperature
- Prevents overheating

Product code	Description	Pack QTY
JGPRB	JG Aura Probe	1

Working parameters & specifications

Maximum Temperature	80°C
Cable Length	4 Metres
Cable Type	26AWG
Rating	300v
